SUMMARY

DevOps Engineer with over 3+ years of expertise in CI/CD, cloud infrastructure, and deployment automation. practical knowledge of Linux, Bash, AWS, Docker, Kubernetes, Terraform, Ansible, and GitHub Actions. competent in creating CI/CD pipelines, containerizing apps, using Terraform to provide and manage cloud infrastructure, and implementing workloads on Kubernetes. knowledgeable about automating deployment processes, putting security checks into place, and resolving problems with applications and infrastructure. In search of a DevOps Engineer position with an emphasis on automation, cloud, and scalable infrastructure.

TECHNICAL SKILLS

- **Cloud & Infrastructure:** AWS (EC2, IAM, VPC, S3, EBS, EKS, ECR, Route 53, CloudWatch), Microsoft Azure (Virtual Machines, Storage, Networking, Automation)
- **Containers & Orchestration:** Docker, Kubernetes (EKS, Deployments, Services, Ingress, ConfigMaps, Secrets, PV/PVC, Health Probes, HPA), Helm, kubectl
- **CI/CD & GitOps:** GitHub Actions, Jenkins, GitLab CI/CD, Argo CD, Deployment Automation, Rollback Strategies
- **Infrastructure as Code:** Terraform (Modules, Remote Backend, State Management), Ansible (Playbooks, Roles, Inventory, Templates)
- **Monitoring & Observability:** Prometheus, Grafana, Loki, Promtail, Node Exporter, cAdvisor, AWS CloudWatch, Log Analysis, Alerting
- **Linux & Networking:** Ubuntu, CentOS, Bash/Shell Scripting, DNS, Networking, Load Balancing, Python
- **DevSecOps:** Gitleaks, Hadolint, Semgrep, Trivy, Secret Scanning, Container Security
- **Databases:** MySQL, PostgreSQL, MongoDB, Redis; Database Connectivity, Persistent Storage, Backup and Recovery
- **Version Control:** Git, GitHub

PROFESSIONAL EXPERIENCE

Azeosoft Web Technologies Pvt Ltd , *DevOps Engineer* 07/2023 – Present | Noida, Uttar Pradesh

- **Observability & MTTR:** Built monitoring and alerting with Prometheus, Grafana, and CloudWatch, enabling early detection of issues and reducing mean time to resolution by 35%.
- **Incident response:** Led response to deployment and infrastructure incidents by correlating logs and monitoring data, resolving the majority within 30 minutes, and capturing fixes in runbooks to make recurring issues faster to handle.
- **Service health & deployment safety:** Standardized Kubernetes readiness and liveness probes across 6 services in 3 namespaces, reducing staging-to-production failures and surfacing unhealthy pods early.
- **Toil reduction:** Automated release preparation with Bash and GitHub Actions, cutting release effort by 35% and removing repetitive manual steps.
- **Infrastructure as Code:** Replaced manual AWS provisioning with reusable Terraform modules across 3 AWS accounts and 12 environments, reducing environment setup from 5 days to 3 days and making rebuilds repeatable and consistent.
- **Efficiency:** Reduced Docker image size by 25% (1.2 GB to 900 MB) using multi-stage builds, speeding up builds and pulls and lowering registry storage use.
- **Shift-left security:** Integrated Gitleaks, Hadolint, Trivy, and Semgrep into CI/CD across 15 repositories, catching exposed secrets, Dockerfile misconfigurations, and code vulnerabilities before merge or deploy.

PROJECTS

AWS Infrastructure with Terraform & Observability, *AWS · Terraform · Prometheus · Grafana · Loki*

- Architected end-to-end AWS infrastructure (VPC, EC2, RDS, S3, IAM, ALB, Auto Scaling) using modular Terraform with remote state on S3 and DynamoDB locking, enabling repeatable dev/prod provisioning.
- Prometheus, Grafana, Loki, and Node Exporter were deployed to gather metrics, centralise logs, and create real-time CPU, RAM, and disc dashboards with threshold warnings based on Alertmanager.
- Automated whole environment provisioning using a single terraform application, which reduces drift, speeds up environment delivery, and does away with human console setup.

CI/CD with GitHub Actions & ArgoCD on EKS, *AWS EKS · Terraform · GitHub Actions · ArgoCD · Helm · Prometheus · Grafana · Loki*

- Enabled version-controlled cluster provisioning by providing EKS, ECR, VPC, and IAM with modular Terraform and remote state.
- Developed GitHub Actions pipelines using ArgoCD GitOps with Helm and rollback-safe deployments for tests, Docker builds, Trivy/Gitleaks scans, and ECR pushes.
- For complete observability, Prometheus, Grafana, and Loki were deployed via Helm, with CI guardrails preventing exposed secrets and susceptible pictures.

EDUCATION

Bachelor of Computer Applications (BCA), *Himalayan Garhwal University* 08/2018 – 07/2021 | Uttarakhand

Coursework: Operating Systems, Computer Networks, DBMS, Data Structures, Software Engineering.
